2010 NSEI (Chatham Strait) SABLEFISH QUOTA ANNOUNCEMENT

Sitka... The Alaska Department of Fish and Game announced today that the 2010 sablefish annual harvest objective (AHO) for the Northern Southeast Inside (NSEI) sablefish fishery will be 1,063,000 round pounds. This is a less than 1% decrease from the 2009 AHO (1,071,000). There are currently 87 permits for this fishery, one less than in 2009; therefore the individual equal quota share (EQS) will be 12,218 round pounds (one half of one percent more than last year's EQS of 12,170 round pounds). The fishery opens by regulation at 8:00 am on August 15, 2010 and will close at 12:00 noon on November 15, 2010. Permit holders should have received a letter detailing any legal overage or underage (up to 5% of the 2009 EQS) incurred during 2009. Their 2010 Personal Quota Share (PQS) will be adjusted accordingly. Permit holders who did not receive that letter should contact Kamala Carroll directly at (907) 747-6688.

The abundance of sablefish in Chatham Strait was estimated using mark-recapture methods and the Petersen estimator. From this estimate a forecast of biomass was developed by decrementing for natural mortality, adding for recruitment, and converting to biomass. A harvest rate was then applied to the point estimate of the forecasted biomass to obtain the allowable biological catch (ABC). For 2010 a harvest rate of $F_{50\%}$ (0.071) was applied to the point estimate of the 2010 forecasted biomass. For comparison, in 2009 an $F_{45\%}$ (0.104) harvest rate was applied to the point estimate of the 2009 forecasted biomass to obtain the ABC. For 2010 the ABC was then decremented as it was in 2009 with three types of decrements: 1) estimated sablefish mortality in the halibut fishery; 2) 3% of the ABC was deducted to account for sablefish caught in sport, subsistence and personal use fisheries and for deadloss in non halibut fisheries; and 3) sablefish anticipated to be harvested in the NSEI sablefish longline survey. In 2010 the decrement for sablefish anticipated to be harvested in the 2010 NSEI longline survey was reduced by the deduction of the round pound equivalent of three 2009 EQS permits. This was done because three permit holders will harvest their 2010 EQS in conjunction with the 2010 NSEI longline survey.

General Considerations

This year the Department has again taken into consideration that there has been no definitive evidence of strong recruitment of sablefish into Chatham Strait, and that there has been another reduction in the Total Allowable Catch (TAC) for the federal fishery as the 2008 and 2009 federal surveys indicate that sablefish abundance has decreased to its lowest level for the domestic survey since 1990. Additionally, Canadian research shows continuing declines in sablefish abundance in British Columbia.

The department continues to evaluate the best way to account for harvest in subsistence and personal use fisheries and deadloss of sablefish in non halibut fisheries. Sport catches of sablefish will be accounted for on charter logbooks and in the creel and call out surveys for 2010 and will better inform the department about sport harvest for the future.

The Department will again in 2011 attempt to more fully integrate the NSEI longline survey with fishermen harvest of their EQS thereby reducing the amount of fish decremented for harvest in the longline survey.

Registration and Logbook Requirements

Fishermen are reminded that they must register prior to fishing and they are required to keep a logbook during the fishery. Registration forms and logbooks are available at Fish and Game offices in Southeast Alaska. Completed logbook pages for each trip must be attached to the ADF&G copy of the fish ticket at the time of delivery. Confidential ADF&G envelopes for logbook pages may be requested when registering.

When registering for the fishery, fishermen will be given a PQS tracking form declaring their 2010 personal quota share. This form is to be used to record the total round landed weight of each delivery. Each permit holder, upon request, must provide the buyer with the total round weight of NSEI sablefish the permit has landed to date. A copy of the completed PQS tracking form must be returned to the department along with the final fish ticket of the season for that permit.

Logbooks for longline gear must include, **by set**, the time and date gear is set and retrieved, the specific location of harvest by latitude and longitude for the start and ending positions, hook spacing, the amount of gear (number of skates and hooks) used, the depth of each set, the estimated weight of sablefish (both retained and discarded at sea), and an estimated weight of the bycatch by species. **Indicate for each set if the target was sablefish or halibut** and if there was any lost gear.

Tags

Fishermen are requested to watch for tagged sablefish. Please record the tag number(s) and attach tag(s) directly to the logbook in the comments section of the corresponding set. All ADF&G tags returned will receive a reward. Tag rewards this year include a t-shirt and entry into an annual drawing for one \$1000, two \$500, and three \$250 cash rewards. To qualify for entry in the annual drawing, the department requires the following information: the tag, set location (latitude and longitude), the date of capture, and the name and address of the person recovering the tag. Additional useful information includes the length of the fish (fork length) and the depth where the fish was caught.

A permit holder must retain all visibly injured or dead sablefish. Sablefish that are not visibly injured or dead may be released unharmed, and the permit holder must record in the logbook, by set, the number of live sablefish released. Please record if you are releasing the fish because they are small or due to reaching your PQS.

Fish Ticket Requirements

Landed weights must be recorded on the fish ticket at the time of delivery and prior to continued fishing. This includes deliveries made to tenders. A permit holder's harvest will be based on the weight as delivered. If a fisherman delivers fish in the round, the round weight must be recorded on the fish ticket. If a fisherman delivers dressed fish, the fish ticket must include the total landed dressed weight, as well as a converted round weight using the standard 0.63 conversion rate. A two percent allowance for ice and slime is permitted. Each permit holder must have onboard copies of all NSEI sablefish fish tickets from the current season as well as their updated PQS tracking form. A copy of the completed PQS tracking form must be submitted to the department with the final fish ticket of the season.

Out of State Deliveries

Fishermen are reminded that a completed fish ticket must be submitted to the department before fish are transported out of state. This requires that a valid Alaska processor code be assigned to the ticket. If fishermen are not already licensed as catcher/exporters, they must either work in conjunction with a licensed Alaskan processor or they must obtain an Alaskan Fisheries Business License and pre-pay the estimated raw fish tax. For further information, contact Shellene Hutter at (907) 465-6131.

Sablefish Possession and Landing Requirements

In the Northern Southeast Inside Subdistrict (NSEI), the holder of a CFEC permit or interim use permit for sablefish may not retain more sablefish from the directed fishery than the annual amount of sablefish EQS specified by the department [5 AAC 28.170 (f)]. However if a permit holder’s harvest exceeds the permit holder's EQS for that year, by not more than five percent, the department shall reduce the permit holder's EQS for the following year by the amount of the overage. If a permit holder's harvest exceeds the permit holder's equal quota share by more than five percent, the proceeds from the sale of the overage in excess of five percent shall be surrendered to the state and the permit holder may be prosecuted under AS 16.05.723. **Transfer of fish between permits is no longer allowed.**

For the 2010 fishery, five percent of the annual EQS is 611 round pounds. **If a permit holder’s harvest is less than the permit holder’s EQS established for the year, the department shall increase the permit holder’s PQS only for the following year by the amount of the underage that does not exceed five percent of the EQS [5 AAC 28.170 (k)].**

Bycatch

The allowable bycatch that can be legally landed on the NSEI sablefish permit card is as follows:

Bycatch Species	<i>NSEI Sablefish Longline Fishery</i>
Demersal Shelf Rockfish (DSR)	1%
Shortraker and Rougheye rockfish	7% in aggregate
Other rockfish & thornyheads	15% in aggregate
Lingcod	0%
Pacific Cod	20%
Spiny dogfish	35%
Other groundfish	20%

Bycatch limits are based on the round weight of the bycatch species to the round weight of the target species, (i.e. sablefish).

Full retention of all rockfish is required excluding thornyheads.

Pacific cod in excess of bycatch limits may be landed on a miscellaneous finfish (M) card. Fishermen with halibut IFQs remaining in regulatory area 2C and a state halibut permit card must retain all halibut, greater than 32 inches in length, up to their IFQ.

Prohibitions

A vessel or a person onboard a vessel from which longline gear was used to take fish in the NSEI area during the 72-hour period immediately before, or from which that gear will be used during the 24-hour period immediately after, an open sablefish fishing period, may not participate in the taking of sablefish in NSEI during that open fishing period [5AAC 28.180(a)]. The operator of a fishing vessel may not take sablefish in the NSEI area with sablefish from another area on board. Also, the operator of a vessel taking sablefish in the NSEI area shall unload before taking sablefish in another area (5AAC 28.170).

Harvest of Bait

The holder of a valid CFEC interim use or limited entry permit may take groundfish in the waters of Alaska in the Eastern Gulf of Alaska Area for use as bait in the commercial fishery for which the permit is held as follows: Except for sablefish, lingcod, yelloweye, shortraker, rougheye, and thornyheads, groundfish may be taken at any time; **sablefish may not be taken for bait or used for bait**. To view the bait regulations see 5 AAC 28.190 in the Groundfish Fishing Regulation book.
